

Autoscan is a tool for converting PDFs faithfully to markdown that LLMs can process easily.

Here's an image:

Let's use headings.

Auto Scan

Autoscan is a tool for automatically creating **Markdown** from **PDF** files. Yes, you heard it *right*.

Markdown (Subheading)

In case you are wondering, Markdown is an easy to use *markup* language for creating formatted text using a plain-text editor.

How cool is that!

Here's another image.

The nice thing is that Markdown can also support tables.

City	Population	Size
New York	Too many people!	Not big enough
Toronto	Too many people!	Big enough
IDK		

Markdown can also display math equations and formulas using plugins like Katex.

Why Use Auto Scan?

Auto Scan is more than just a tool—it's a time-saver and a game-changer for anyone working with PDFs and Markdown. Here's why:

- **Accurate Conversion:** Faithfully translates complex PDF layouts into Markdown without losing formatting.
- **Easy to Use:** No technical expertise required—just upload and let the tool work its magic.
- **Customizable Output:** Tweak the generated Markdown to suit your needs.

Blockquotes

Use blockquotes to emphasize key points:

Markdown is an incredibly versatile language that works seamlessly across different platforms.

Code Blocks

Markdown makes it easy to include and format code snippets. For example:

```
def auto_scan(pdf_file):  
    # Convert PDF to Markdown  
    return markdown_output
```
